People List Application

You are supposed to generate an Android Mobile Phone application to manage a list of people which contains name, age and gender info of each person.

Perform the following steps:

1. Create an Android Studio project with a meaningful name.
2. Construct a user interface allowing the user to manage the person's name, age and gender.
3. The application also required to visualize the recorded people in a ListView located under the information enterance panel.
4. Whenever user of the application push the add button the application add a new entry into the ListView. Similarly delete and update processes performed on the selected person.

Note: You need to use Custom Adaptor approach
